Performance Evaluation of a T-cell Reception Gamma Gene Rearrangement NGS Assay for Clinical Practice

Vitalii Borodin, MD
Molecular Genetics Fellow
Department of Pathology
Virginia Commonwealth University

Educational Objectives
At the conclusion of this activity, the learner should better be able to:
1. To introduce general steps to validate molecular tests
2. To demonstrate the concept of T-cell gamma gene rearrangement and clonality testing
3. To demonstrate results of the validation study using NGS platform and fragment analysis to detect clonality.

In compliance with the Accreditation Council for Continuing Medical Education (ACCME) Standards for Commercial Support of CME, University Health Services Professional Education Programs (UHS-PEP) of VCU Health System discloses all relevant relationships which program faculty and planners report having with commercial interests whose products or services they may discuss during their presentation, or that they may select as topics for presentation.

The speaker for today has no relevant relationships to disclose.
The members of the planning committee and/or UHS-PEP staff have no relevant relationships to disclose.

In compliance with the ACCME Standards, all relationships reported above have been resolved according to VCU’s Policy on Conflict of Interest. All presenting faculty affirm that they will employ the best available evidence from all sources to support any clinical recommendations made in their presentations. If learners detect any commercial bias in any presentation, they should document their observations on the Activity Evaluation Form.
